**Inteplast Group Signs License Agreement with CEVN
and Launches Patented Dual Colored, Dual Sided Cellular PVC Decking**

Livingston, NJ – September 1st 2010- INTEPLAST GROUP Ltd. has executed a license agreement with CEVN Corporation for the exclusive rights to manufacture and market the CEVN brand and patented deck board design using Inteplast's proprietary cellular PVC manufacturing process. INTEPLAST today announced the launch of the industry's first dual color, dual sided cellular PVC deck board that will change the way distributors, dealers, contractors and homeowners think about decking.

CEVN's patented product design showcases the latest trends in exterior style and beauty that frees homeowners and contractors from the traditional constraints of color and design while providing unsurpassed quality and long-lasting performance. CEVN's innovative deck product also offers the unique opportunity for wholesale distributors and retail dealers to effectively manage inventory, offer more choices with fewer skus and improve productivity, product availability and customer service.

CEVN decking is engineered with Inteplast's proven cellular PVC technology with no fiber fillers in its core, which eliminates edge cracking, stain retention and water absorption. This core is surfaced with a specially formulated durable, highly weatherable layer that resists stains, fading, scratching and is more abrasion resistant than wood-plastic composites. CEVN's new deck product combining high performance, ultra-low maintenance and ease of installation make it ideal for a variety of applications.

Added to this, CEVN's proprietary process uses the blend of light and dark hues to create natural variation found in real wood with a photo-etched surface pattern that creates one

of the most attractive and realistic wood looks on the market.

“We are proud to introduce a new generation of decking product solutions unsurpassed in the total value it offers our customers,” says Mark Ippolito, President of CEVN Corp.

“By integrating the ultimate in deck design flexibility with the durability and long-lasting performance of two complementary colors on one board and a look inspired by the beauty of wood, we think this product will be well received by contractors and homeowners alike, and the distributors and dealers who service them.”

CEVN recently announced an agreement with WOLF, a major supplier of building materials in the eastern United States, to begin distribution of CEVN decking to building materials dealers in New York, Connecticut, Rhode Island, Maine, New Hampshire and Vermont. “CEVN’s cutting edge technology is a true breakthrough for everyone in the building and remodeling business,” according to Craig Danielson, president of WOLF.

The CEVN brand will initially offer six rich colors of dual-colored decking, along with single-colored fascia and single-colored deck boards for stairs and special applications.

CEVN decking is sold to professional contractors through a national network of distributors. To learn more, visit www.cevndecking.com.

All INTEPLAST decking products are proudly made in the U.S.A.
